YOUR PROBLEM, OUR INSPIRATION

We are the original inventors and manufacturers of fixed polymer safety barriers. Our products are used around the world and provide unbeatable, money-saving protection for workplaces, personnel and equipment.

The highly skilled and fully certified A-SAFE installation team offers a comprehensive installation experience from survey to sign-off and aftercare. Our specialist tools are at the cutting edge of our industry and include purpose-built drilling rigs that can create four simultaneous holes and significantly reduce Hand Arm Vibration Syndrome (HAVS), as well as innovative pipe-cutting and diamond drilling equipment. We are industry leaders not only in the quality of our products, but also in the method of our installation. From efficient assembly to the constant monitoring of standards, we place customer satisfaction at the heart of every installation.

“The A-SAFE installers worked constantly with very few breaks and to a very high standard in cleanliness and communication and nothing has been to much effort

”
Perkins Engines Company Limited

FROM ORDER TO SIGN-OFF

A guide to the A-SAFE installation process

A-SAFE has fitting teams throughout the UK, as well as dedicated project teams providing a single point of contact for the delivery of your project to ensure that your installation runs smoothly and is completed as efficiently as possible. We will take care of you from the moment we receive your order.

The first step is to liaise with you on planning the installation. We will work with you to agree everything from installation dates to delivery requirements and health and safety considerations. Our project manager will also be on hand to discuss any specific questions that you may have, or to attend a pre-start meeting should this be required.

As a team, we work on a variety of projects and installations. These can range from direct fitting for end-users through to CDM / large-scale construction projects installed over several months and in multiple phases. Our customers are no less varied and include companies from such diverse industries as food and drink, cold storage, automotive, air and seaports, as well as hospitals and car parks. We are also a Safe Contractor and Constructionline member for safety schemes in procurement.

Pre-start meeting

Once an installation is approved and agreed, we will arrange a crucial pre-start meeting with you to discuss the logistics of A-SAFE equipment being moved on site. This might include the need to clear a specific area, the safe management of personnel or the removal of existing barriers as well as agreeing a program of works.

RAMS and H&S statements

Risk Assessment Method Statements (RAMS) and health and safety procedures are adhered to with the utmost care. We draft all documentation for you – and a method statement, outlining how we plan to carry out the full installation process – before then agreeing on a suitable start date.

Upon completion of your new A-SAFE barriers, the installers will guide you through the installation to ensure you are 100 percent happy with the works carried out. Our office team will then follow up on your feedback to ensure you are satisfied with the work we carried out. This is also your opportunity to share any additional comments you may have.

“Another exemplary performance from the installers, as we always seem to have when they work at Beiersdorf. They would have stopped at nothing to ensure it was installed to their usual exceptional standards – true credit to A-Safe those two are. The barrier looks amazing, and has received many positive comments.

”

SPECIALIST EQUIPMENT AND CERTIFIED CREWS

Fully trained and certified crews

Our A-SAFE installation teams are fully trained on all A-SAFE products and aspects of the installation process. They carry full certification and training for health and safety, First aid, SSSTS, CSCS and IPAF to name a few. We also have industry specific certification such as SPA passports and AirDat.

Specialist equipment and vans

Each of our installation teams carries job-specific equipment, including drilling rigs and rail-cutting equipment to maximise the quality of the installation and on-site efficiency. This ensures minimal disruption to your operations. All A-SAFE installation vans are also equipped with generators to run our 110V tooling, further reducing potential hazards on site.

Benefits of using A-SAFE installers

- Faster overall installation, minimising disruption
- Work to the highest health and safety standards
- Minimal impact on company resources
- Specialist tooling for improved efficiency
- Unrivalled product experience
- On-site troubleshooting
- Ability to modify barriers on site
- Quality of installation
- Turnkey project management

A-SAFE install teams accreditations

“Overall we are very happy with the installation and product.
