Technology Manufacturing Excellence

RediRack is a leading UK manufacturer of storage systems based near Sheffield, in the heart of the UK steel industry. The inventors of frame and beam pallet racking, RediRack has been manufacturing racking systems in the UK for nearly 40 years and is internationally recognised for quality and consistency.

As the creators of the world's first frame and beam pallet racking system, RediRack manufactures, supplies and installs a low maintenance, high quality proven product that is successfully installed in warehouses across the globe.

With a product that has withstood the test of time, RediRack offers an extensive range of frame duties and beam sections available in a variety of widths, heights and lengths which means RediRack are able to create a tailor made solution for even the most challenging racking requirements.

As important to us as the quality of our product are the relationships we have with our clients. Many of our almost 100-strong team have been working for RediRack for more than 20 years, giving you confidence that we will understand your company and unique needs from the beginning to the end of any project.

With a market leading product, a knowledgeable, experienced team and first class customer service support, RediRack is the natural solution for your pallet racking needs.

Case Studies

Kellogg's

Kellogg's are the world's leading producer of cereal and a leading manufacturer of convenience foods. They built a 35,000 square metre distribution centre in Manchester as part of a plan to consolidate their warehousing and distribution operation.

RediRack worked with Kellogg's to create a solution for their unique onsite needs; the result is a 14 metre high building with 22 loading bays with dock levellers, two ground level bays and four automatic intake bays storing up to 32,000 pallets. The newly designed solution includes a double deep racking configuration that stores twice as many pallets as narrow aisle racking in the same space.

At Kellogg's, the 24 double entry and two single entry racking runs stretch to nearly 120 metres in length and store full pallets on four levels, with the top beam at 10.8 metres. Sacrificial legs are fitted throughout and RediRack built an automatic sprinkler system into the racking.

"RediRack performed extremely well." Mark Hamilton, Project Manager concluded. "On a project of this scale, flexibility and cooperation are key ingredients. RediRack were able to adapt their installation schedule to accommodate changes to the overall build programme and liaise closely with other suppliers to ensure that deadlines were achieved."

Poundland

Poundland sells everything from tools to toiletries and clothing to confectionery across the UK and employs more than two thousand people.

RediRack designed the racking which is laid out to make best use of the building's height. Rising to nearly ten metres, the system has six beam levels with each bay capable of storing two pallets, up to 1.7metres high.

The racking is installed in three blocks, with 43 double and five single runs overall. Each run consists of 17 six-high double bays, providing 20,000 pallet locations which copes with the 12,000 different product lines that the company handles each year. In particular, Poundland liked the idea of RediRack's sacrificial leg which they believe will definitely reduce on-going maintenance costs. The racking installation was completed two weeks ahead of schedule and to the targets set by Poundland.

Steve Smith, CEO said of RediRack: "Previously we had bought second hand racking. RediRack helped us to prove that the costs associated with dismantling, transporting and reassembling the amount of racking that we required made it a more expensive exercise than buying new."

Tetrosyl

Tetrosyl is the largest manufacturer and supplier of car care products in the UK. With an annual turnover of over £80 million, the privately owned company also specialises in oils & lubricants, refinishing, and DIY products. The company has a significant worldwide presence, extending its global reach to 76 countries.

Tetrosyl owns the market leading brands; Carlube, Tetrion, Aqua-T, Autopratic, and CarPlan, which boasts the recognised names of T-Cut, Triplewax, and Wonder Wheels, they pride themselves on product excellence. Business growth lead the company to relocate its main distribution centre to Manchester and RediRack fitted it out with pallet racking and a mezzanine floor.

Barry Rennie, site manager said: "This is a very busy warehouse and we didn't have a lot of time to get it up and working. RediRack were great, providing advice and assistance from the planning stages right through to the installation, including liaising with other contractors and suppliers."

Tetrosyl has a 150,000sqft warehouse with 18,000 pallet positions serviced by a fleet of eight articulated trucks. The whole scheme is painted in the company's corporate blue and yellow. Barry concludes: "RediRack were very efficient, completing the job within our six week time frame to our complete satisfaction."
